# Sprint 3 Report - StudyBuddy

## 1. Group Information

Group Name: Real

Group Members:
- Mohsin Aalam Ansari (A00035987)
- Vijohnson (A00022068)
- Gautam B K (A00020512)

## 2. Introduction

This report outlines the progress made during Sprint 3 of the StudyBuddy project. The aim of this sprint was to implement core backend and frontend functionality, integrate the database, and ensure the application can run successfully using Docker. The system allows users to create accounts, build profiles, and connect with other students.

## 3. User Stories Implemented

The following user stories were implemented during Sprint 3. Each feature interacts with the database and supports the core functionality of the application.

- Register Account – Users can create accounts with validation.

- Login – Users can authenticate and access their dashboard.

- Create Profile – Users can input subjects and skills.

- View Users List – Displays all registered users.

- View User Profile – Displays detailed user information.

- Search by Subject – Allows filtering users by subject.

- Create Listing – Users can post study requests/offers.

- View Listings – Displays all listings.

- View Listing Details – Shows detailed listing info.

- Tags / Categories – Listings grouped by subject.

## 4. System Screenshots

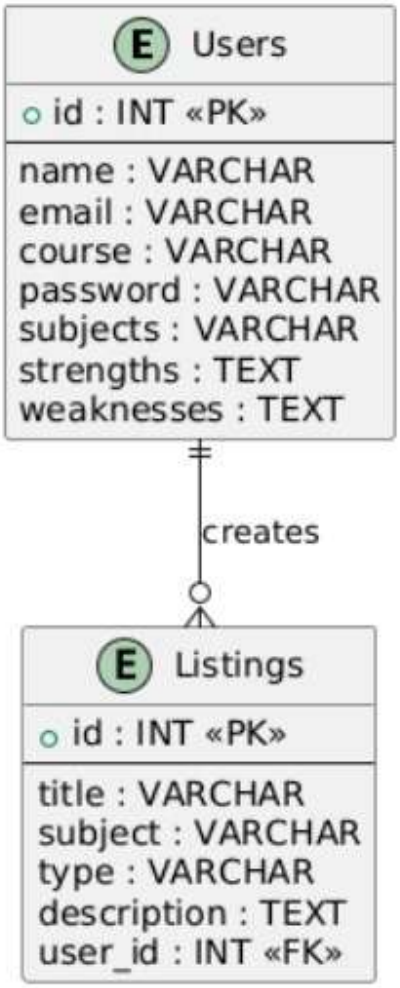
## 5. Database Design

### Users Table

| Field | Type | Description |
|---|---|---|
| id | INT (PK) | Unique user ID |
| name | VARCHAR | User name |
| email | VARCHAR | User email |
| course | VARCHAR | Course name |
| password | VARCHAR | User password |
| subjects | VARCHAR | Subjects |
| strengths | TEXT | User strengths |
| weaknesses | TEXT | User weaknesses |



## Listings Table

| Field | Type | Description |
|---|---|---|
| id | INT (PK) | Listing ID |
| title | VARCHAR | Title of listing |
| subject | VARCHAR | Subject |
| type | VARCHAR | Offer or Request |
| Description: TEXT | Details | |
| user_id | INT (FK) | Linked user |

### Relationship

- One user can create multiple listings
- Listings are linked to users via user_id

## 6. Technical Implementation

Frontend: Built using HTML, CSS, JavaScript, and PUG templates.
Backend: Implemented using Node.js and Express.js.
Database: MySQL used for storing user and listing data.
Routing: Express routes handle requests and responses.
Docker: Used to ensure consistent development environment.

## 7. Task Breakdown

| Task | Team Member |
|---|---|
| Database setup | Gautam |
| Backend routes | Mohsin |
| Frontend pages (Pug templates) | Vijohnson |
| Testing and debugging | All members |

## 8. GitHub Links

Repository:

https://github.com/mohseen23/studybuddy

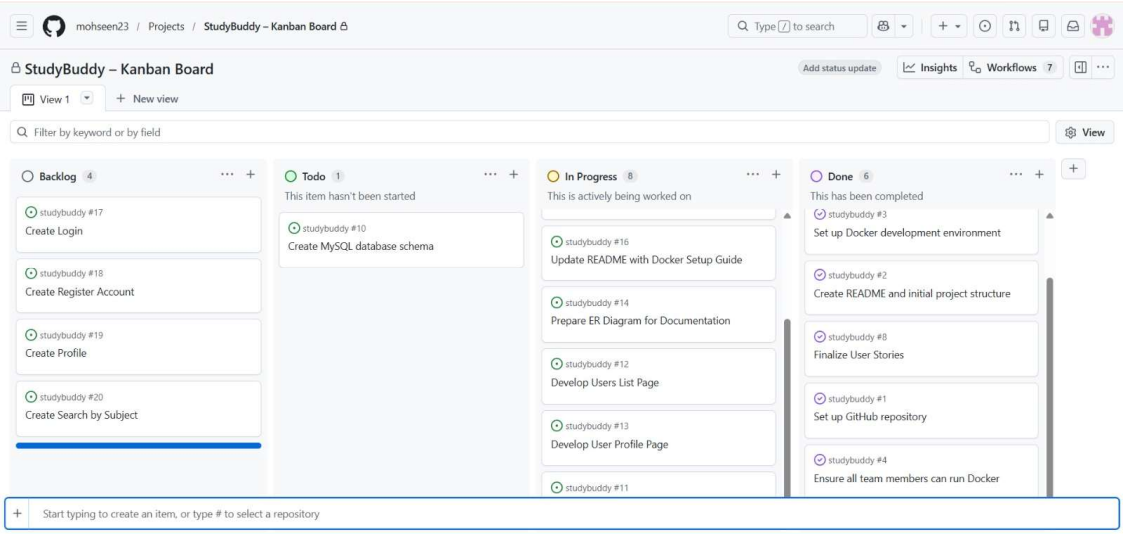
Kanban Board:

https://github.com/users/mohseen23/projects/1

## 9. Contribution Evidence

All team members contributed through commits and collaboration. Screenshots of GitHub contributions and activity should be inserted below.

## 10. Kanban Board



Tasks were tracked using a Kanban board across To Do, In Progress, and Done columns.

## 11. Challenges and Solutions#

During development, the team faced challenges such as database integration and routing issues. These were resolved through debugging, testing, and collaboration.

## 12. Meeting Record

Date: 19/03/2026
Time: 15:00–19:00

Discussion: Implemented core features and tested application.
Actions: Finalise Sprint 3 and prepare demo.

Facilitator: Mohsin
Note taker: Vijohnson
Attendees: Gautam, Mohsin, Vijohnson

## 13. Conclusion

Sprint 3 successfully delivered core system functionality. The application is now capable of handling users, profiles, and listings. Future work in Sprint 4 will focus on advanced features and improvements.
